## **Base station battery laying**

## Overview

---

How many batteries does the base station take?

The Base Station takes four (4) 1.2V, 1300mAh nickel-metal hydride (NiMH) rechargeable batteries. Regular alkaline batteries should never be inserted into the Base Station, as they may damage the device. Once you have acquired the necessary NiMH rechargeable batteries, you can follow the steps below to replace them:.

What is a base battery system?

The Base battery system is built for performance and reliability. It combines a high-capacity lithium iron battery with intelligent software to optimize energy use. The Base battery system has three main components: the battery pack, inverter, and hub. The long white unit is the battery pack. We mount the battery pack on the ground.

Do base batteries run in two directions?

Base batteries run in two directions, which is how Base is able to keep costs low for homeowners. The batteries charge during off-peak hours, like midday and late at night, when energy is more available and demand is low.

Why does my base battery fluctuate over time?

The charge level of your Base battery will naturally fluctuate over time, rising and falling throughout a multi-day cycle. This is a normal and necessary part of how the system operates, ensuring the smooth functioning of our grid-balancing efforts.
