

Dominica Green Energy Storage Project

Overview

What is the Dominican energy project?

This project is designed to support the Commonwealth of Dominica in developing and integrating clean, sustainable and low-cost energy. Through this \$38.5 million project, a new robust transmission network will be built to withstand natural hazards, strengthening Dominica's electricity grid.

How will a new transmission network strengthen Dominica's electricity grid?

Through this \$38.5 million project, a new robust transmission network will be built to withstand natural hazards, strengthening Dominica's electricity grid. The challenges faced by Dominica, as a Small Island Developing State, are multi-faceted, stemming from natural hazards, topographical constraints, and external economic shocks.

Is geothermal energy a transformative solution for Dominica?

In response to these challenges, geothermal energy has been identified by the Government of Dominica as a transformative solution to propel the country toward a green and resilient economy, particularly as it possesses geothermal resources far exceeding its current domestic needs.

What is Dominica geothermal risk mitigation project?

The World Bank's ongoing Dominica Geothermal Risk Mitigation Project is supporting the development of the first geothermal power plant through drilling of new geothermal wells, critical for plant viability and increasing its capacity. The project will also oversee technical studies.

Why is Dominica struggling with electricity?

Dominica's electricity sector is currently challenged by outdated infrastructure, largely dependent on aging diesel generators which result in high electricity expenses and an unreliable power supply, hampering the country's competitiveness.
