Do energy storage stations improve frequency stability?

With the rapid expansion of new energy, there is an urgent need to enhance the frequency stability of the power system. The energy storage (ES) stations make it possible effectively. However, the frequency regulation (FR) demand distribution ignores the influence caused by various resources with different characteristics in traditional strategies.

What is frequency regulation power optimization?

The frequency regulation power optimization framework for multiple resources is proposed. The cost, revenue, and performance indicators of hybrid energy storage during the regulation process are analyzed. The comprehensive efficiency evaluation system of energy storage by evaluating and weighing methods is established.

Is energy storage a new regulatory resource?

As a new type of flexible regulatory resource with a bidirectional regulation function [3, 4], energy storage (ES) has attracted more attention in participation in automatic generation control (AGC). It also has become essential to the future frequency regulation auxiliary service market .

What is the revenue of the energy storage station?

The revenue of the energy storage station comprises the earnings obtained from PV system and BESS participating in market transactions (F1), as well as the revenue generated by BESS in the frequency regulation ancillary service market (F2).

Are photovoltaic plants involved in electricity trading and frequency regulation ancillary services?

This study focuses on the involvement of photovoltaic (PV) plants in medium and long-term transactions. It also explores the participation of battery energy storage system (BESS) in electricity trading and frequency regulation ancillary services.

How efficient are energy storage stations?

The charging and discharging efficiency of the energy storage station is 95 %, with a conversion efficiency of 90.25 % for each charging and discharging cycle, resulting in a loss of 9.75 % per cycle. In real-time electricity pricing, there is a significant price difference between peak and off-peak periods.
