

# **How high should the inverter of a communication base station be**

## Overview

---

Are base station antennas omnidirectional or directional?

Base station antennas are available in different shapes and sizes and can be either omnidirectional antennas or directional antennas. The operating frequency, coverage area, range, and other performance parameters can vary depending on the base station antenna that is chosen for a specific network.

How high should a transmitting antenna be?

A height of 120 feet or even higher will provide even more advantages for long-distance communications. To a distant receiving station, a transmitting antenna at 120 feet will provide the effect of approximately 8 to 10 times more transmitting power than the same antenna at 35 feet.

What is a base station antenna?

Base station antennas are also known as cell site antennas and cellular antennas, and they are typically mounted on a tower or rooftop and connected to a base station through coaxial cables. Base station antennas are available in different shapes and sizes and can be either omnidirectional antennas or directional antennas.

Why are sector base station antennas important?

Hence they have a high gain and therefore better signal strength and longer radiation distances or ranges. Sector base station antennas are ideal to set up wireless networks in high density urban areas. These antennas can be combined to form multi sector antennas in order to improve the coverage area.

Why do omnidirectional base station antennas have a large coverage area?

Omnidirectional base station antennas have a large coverage area as they can transmit and receive signals over 360 degrees, however their gain is low and hence lower signal strength and shorter range.

What is a citizen's band base station antenna?

Citizen's Band base station antennas are typically used for short to medium distance communications and generally operate in the frequency range of 26.965 MHz to 27.405 MHz. These antennas can be either omnidirectional or directional antennas and they are available in a variety of shapes and sizes.
