Can a 1600W PSU run a 3000W power supply?

A 1600W rated PSU that is 90% efficient will draw around 1760W from the wall, right at the maximum. Europe and other parts run on 240V and can actually power a 3000W power supply. But no big name will make them because they are useless to everyone except Crypto miners. Edit: Europe looks to be 240V 10A but that PSU will work somewhere.

Do manufacturers have to comply with energy conservation standards?

Though in balmy rest of the world where they have 240v 13A home outlet or the 64A 415v 3 phase industrial outlets.
