

**SolarMax Pro Energy Storage Systems**

# Italian Clam Photovoltaic Container

## Overview

---

Why do giant clams have iridescent insides?

Giant clams' iridescent insides form a powerful system for taking in sunlight. Join Our Community of Science Lovers! I agree my information will be processed in accordance with the Scientific American and Springer Nature Limited Privacy Policy.

Do clams eat algae?

The rest of the incoming light is absorbed, and much of it is channeled to photosynthetic algae the clams cultivate within their bodies as a food source.

Do clams inflate and deflate during the day?

In the new study, the researchers resolved this discrepancy by factoring in a quirk of clam behavior: there is evidence that clams might inflate and deflate their mantle throughout the day. This could let the clams further optimize their sunlight exposure, the scientists determined—allowing them to clock in at a modeled 67 percent efficiency.

## Italian Clam Photovoltaic Container

---

### **Giant clams may be the most efficient solar energy systems on ...**

In a new study led by Yale University, experts suggest that the solution to solar energy efficiency may lie beneath the tropical coral reefs. Stepping away from conventional ...
