Learn how solar panels are attached to different roof types. Discover how to ensure your roof can support the weight and what to do if you need a new roof.

The solar industry came up with solutions for installing solar panels on nearly all roof materials. Be it the typical asphalt shingles that cover many of.

As manufacturers get closer and closer to making solar shingles widely available, there's been more and more buzz around the topic. One thing is for certain, solar shingles really look.

Most people are wary of holes in their roofs - and that's fair. With the exception of standing seam metal roofs and flat roofs, penetrations in the roof are required to properly mount the.

Solar panels aren't exactly big heavy bricks, but they do weigh something - around 2.5 to 2.7 pounds per square foot. Before installing your system, it's a good idea to make sure your roof can support the added weight. In the vast majority of cases - let's say.

Solar shingles are a form of BIPV (Building-integrated photovoltaics) and are directly attached to the roof structure. Here, there is no panel mounting procedure needed. More people are starting to install solar shingles as they can be made to look like tiles and give an even look to the roof.
