# **Photovoltaic plant energy storage frequency regulation system**

## Overview

---

Do PV systems participate in primary frequency regulation?

From the perspective of control strategies, the participation of PV systems in primary frequency regulation can generally be categorized into two types: load reduction control and coordinated control with PV-energy storage systems.

Can a grid-connected solar photovoltaic system participate in primary frequency regulation?

**Conclusion** This paper proposes a fuzzy-based control strategy for the grid-connected solar photovoltaic system to participate in primary frequency regulation without any energy storage support. A combined fuzzy based de-load control and control mode selector was proposed to enable PV operation at a scheduled level of power reserve.

Can photovoltaic power generation systems with different reserve capacities participate in frequency regulation?

This strategy allows PV power generation systems with different reserve capacities to participate in frequency regulation, optimizing the load reduction controller and ensuring system frequency stability. However, this strategy cannot fully utilize the frequency modulation potential of photovoltaics with different capacities.

Do energy storage systems participate in frequency regulation?

Current research on energy storage control strategies primarily focuses on whether energy storage systems participate in frequency regulation independently or in coordination with wind farms and photovoltaic power plants .

How to extend the service of PV to secondary frequency regulation?

To extend the service of PV to secondary frequency regulation it needs to be

de-loaded for a longer period of time this may reduce the utilization factor of the plant. In summary, the inertial response from PV provides sufficient time for the governor control to take over the action.

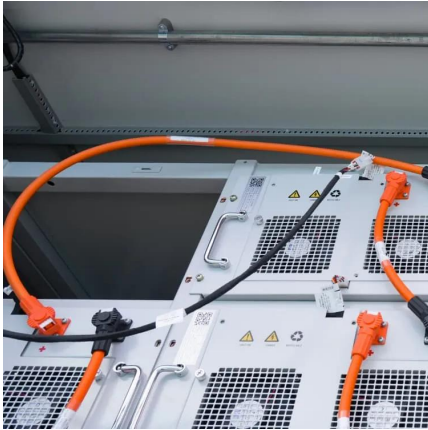

Do distributed energy resources contribute to primary frequency regulation?

Numerous studies have investigated control strategies that enable distributed energy resources (DERs), such as wind turbines, photovoltaic systems, and energy storage, to contribute to primary frequency regulation.

## Photovoltaic plant energy storage frequency regulation system
