What is a portable cathodic protection power supply?

A portable cathodic protection power supply with 60V, 30A DC output and a built-in solid state interrupter. The Universal Rectifier model TR-3 air cooled cathodic protection test rectifier, is a portable cathodic protection power supply used for a variety of CP field test scenarios.

What is included in a portable rectifier?

Optional Interrupter can be integrated or excess Space allows external interrupter to be added or stored with the unit. Portable Rectifier with adjustable output, includes analogue Volt and Amp Meters, test Sockets as well as AC & DC Breakers. Hard carry Case includes Carry Handle, trolley wheels and telescopic handle.

What is a portable rectifier?

The portable rectifier is built in a robust portable Case with or without wheel options. The units are designed with additional storage space available to fit cables, interrupters and small tools as a ease of access benefits. Black Carry Case is secure and Lockable, comes with Wheels and extendable handle.

Do you need a rectifier for a DC power supply?

In order to power any circuit, a power supply is needed; and if you want to power electronic devices from an AC supply, a rectifier is needed. Figure 1.1 illustrates a schematic diagram of a DC power supply. There is a 120 V (rms), 60 Hz AC line that feeds the power supply, which delivers a voltage  $V_O$  to the electronic circuit (load block).

What is a power rectifier used for?

Used as a general purpose rectifier in power supplies, or for clipping and steering applications. High performance alternative to small signal diodes where space does not permit use of power rectifiers. May be used in hostile

environments where hermeticity and reliability are important i.e. (Military and Aero/Space). MIL-S- 19500/ 240 approvals.

What is a corrosion service portable transformer rectifier unit?

The Corrosion Service Portable Transformer Rectifier Unit (TRU) is one of the most essential tools in the cathodic protection technician's tool box. The TRU allows a variety of surveys to be performed where they would not otherwise be possible by supplementing, mimicking, or replacing permanent cathodic protection installations.
