Use of smart energy storage batteries in Mexico

Overview

How will battery storage impact the energy system in Mexico?

As Mexico establishes itself as a regional renewable energy hub, we expect battery storage to become an essential means for enhancing the flexibility of its grid system to provide more versatile energy delivery across the country.

Will Mexico colocate battery energy storage systems?

Future wind and solar energy projects in Mexico will be required to colocate battery energy storage systems equivalent to 30% of their capacity, a senior government official told the Senate on Tuesday.

Does battery storage provide services to the Mexican electric grid?

While battery storage does not currently provide services to the Mexican electric grid, and while several operational and regulatory challenges still need to be overcome, there is considerable potential for battery storage to offer valuable economic and reliability services going forward.

Should energy storage be a priority in Mexico?

If energy storage deployment is considered a priority in the following years, Mexico could accelerate investments through a mix of storage procurement targets and financial incentives. A strong storage market can also be built over time by offering rebates, loans, investment grants, tax credits or other financial incentives.

Should energy storage be regulated in Mexico?

5.2.1. Mexico Energy storage appears scarcely in Mexican legislation and the few regulations that mention it leave the door open to potentially consider EST as either generation assets or transmission and distribution assets. If EST were regulated as generation assets, they could operate under a regime of free competition.

How can battery technology improve energy production?

Incorporating battery technology into renewable energy operations can help enhance production through the storage of excess energy during high-production hours, it can also improve the security of the grid system by reliably delivering power at all hours, helping to avoid power shortages at peak usage times.
