

**SolarMax Pro Energy Storage Systems**

## **What is the Ukrainian outdoor power supply standard**

## Overview

---

Just like the rest of Europe, the voltage in Ukraine is 230 volts and the frequency is 50 Hz. Ukraine has standardized on type F sockets and plugs. Type C and type E plugs can also be used thanks to their compatibility with type F sockets. What is the standard voltage in Ukraine?

The standard voltage in Ukraine is 220 V at a frequency of 50 Hz. In Ukraine, power plugs and sockets (outlets) of type C and type F are used.

What type of power sockets are used in Ukraine?

In Ukraine, power sockets of types C and F are used. The standard voltage is 220 V at a frequency of 50 Hz. To ensure compatibility, check if you need a power plug (travel) adapter.

What type of power plugs are used in Ukraine?

In Ukraine, power plugs and sockets of type C and type F are used. The standard voltage is 220 V at a frequency of 50 Hz.

What type of power outlet is used in Ukraine?

Ukraine uses Type C and E power outlets, which consist of two round prongs. These are compatible with each other and similar to Type F, making them common throughout Europe.

Which plug sockets can be used in Ukraine?

Type C and type E plugs can also be used thanks to their compatibility with type F sockets. Typically, type C plug sockets are not allowed to be installed in Ukraine: these outlets are not earthed and are therefore considered dangerous. Only type F power points are permitted because they are grounded and therefore significantly safer.

What is the frequency of Ukraine's power supply?

Ukraine outlets operate on a 230V supply voltage and 50Hz frequency. In contrast, the USA operates on a 120V supply voltage and 60Hz frequency.
