What is the appropriate size of an outdoor portable power bank

Overview

Quick Answer: For simple overnight camping with just phone charging and basic lights, 100-200 Wh is sufficient. For weekend trips with multiple devices per person, 500-800 Wh will be ideal for most families. What size power Bank do I Need?

Fortunately, there's an easy equation to figure out the size you need. Let's say that your power bank has 5,000 mAh. You need to multiply the capacity by the volt rating to get the mWh: the megawatt-hour rating.

How much Mah does a power bank have?

Power banks are available in a wide range of capacities, from as little as 1000 mAh to as much as 50,000 mAh or more. However, it's worth noting that as the mAh capacity of a power bank increases, so does its physical size and weight- which can be a serious detriment in the backcountry or while traveling. Bigger is not always better!.

What is a power bank?

A power bank is a portable charger that you can use when you don't have access to an electrical outlet. They can be used as a backup battery for anything that may need charging (phone, laptops, speakers, watches, etc). However, not all power banks are created equal, and finding the right capacity for your needs can be challenging.

How to choose a power bank for a laptop?

If you have a laptop with a 50,000 mAh battery, you should select a power bank with at least that capacity for a full charge. Charging Speed: Charging speed is determined by the output rating of the charger, measured in watts. A charger should ideally have an output that matches or exceeds the input requirement of your device.

How much does a power bank weigh?

Another new-age power bank like the Anker 737 — which has a capacity of 24,000 mAh — has a compact shape and weighs around 1.4 pounds. Besides that, it has USB-C fast charging ports. Note that conventional heavy-duty power banks take a long time to charge fully.

How are power banks rated?

Most power banks are rated in terms of their maximum output current, which is the maximum amount of current that they can deliver at any given time. The output current, in conjunction with the mAh capacity, determines how many times your device can be charged and how quickly it can be charged.
